-------------------------	----------------------------	-----------------------------	-------------------------------

PROFILE

Software engineer and technical co-founder who takes products from idea to production. As **CTO of goParkly** I lead engineering for a smart-parking platform with real-time availability and in-app payments. As **founder of ScoutVerse.ai** I am building an AI platform that turns ordinary phone video into trusted football performance data. I work across the whole product, from the user experience to back-end systems, data, cloud infrastructure and applied AI, and I lead the teams that deliver it.

EXPERIENCE

CTO & Co-Founder, goParkly

2025 – Present

Smart-parking platform connecting drivers with available spaces · Accra, Ghana · goparkly.co

- Lead technology strategy and platform architecture for real-time space availability, bookings and in-app payments, serving both drivers and parking operators.
- Built the platform for reliability from day one and keep production running at **99.9% uptime**.
- Oversee the full product lifecycle, from the web and mobile experience to back-end services, data and cloud infrastructure.
- Translate business goals into a clear engineering roadmap and delivery plan.
- Hire, mentor and lead the engineering team and set the standards it builds to.

Founder, CEO & CTO, ScoutVerse.ai

2026 – Present

AI football ecosystem for players, scouts, agents and clubs · scoutverse-frontend.vercel.app

- Founded the company and lead product, technology and go-to-market strategy.
- Architecting a **dual-brain AI engine**: computer vision turns phone video into physics-verified metrics such as top speed and distance, while a multimodal AI layer assesses tactical awareness and decision-making.
- Designing visual overlays that draw speed and acceleration onto the clip at the exact moment of each metric, so every rating traces back to the footage.
- Building web and mobile experiences with intelligent search across player profiles, metrics and clips, plus subscription and pay-per-use billing.
- Shaping a four-sided marketplace with verified player profiles, talent requests from clubs and collaboration tools for agents.

Full-Stack Developer, Felitech

2021 – 2025

Independent practice building websites and web applications

- Designed, built and launched websites and web apps for clients and my own products, from brief to deployment.
- Delivered the corporate website for United Development Company.
- Shipped a portfolio of live web apps for currency conversion, weather, image search and note-taking, each connected to third-party data services.
- Designed and built felixabada.com, with motion design, responsive layouts and structured data for search.

EDUCATION

Ghana Technology University College

Accra, Ghana

SELECTED WORK

goParkly

goparkly.co

Smart parking with live availability and in-app payments.

United Development Company

united-development-company.vercel.app

Corporate website, designed and built end to end.

ScoutVerse.ai

scoutverse-frontend.vercel.app

AI scouting that turns match video into verified player data.

felixabada.com

felixabada.com

Personal portfolio and résumé.

CORE COMPETENCIES

Full-stack engineering

Web and mobile apps, APIs and databases, end to end.

Applied AI

Computer vision and multimodal AI in real products.

Payments & marketplaces

In-app payments, subscriptions and multi-sided platforms.

Platform architecture

Reliable systems designed to grow with the business.

Cloud & reliability

Deployment, monitoring and uptime in production.

Technical leadership

Roadmaps, hiring, mentorship and engineering culture.

HOW I LEAD

Scalable by design. Systems that grow with users and markets without a rewrite.

Platform thinking. Foundations that let ideas become sustainable products.

Human-centred. Real-world impact on the end user comes first.

“Platforms are built not just with code, but with culture.”

LEADERSHIP PHILOSOPHY
